Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

Having contaminated water is not only directly affecting the animals and plants in the water, but causing humans problems too. We are not able to swim in the beaches like usual. We need something to lower the amounts of E. coli in the water.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

NR 243 must include:

- Requiring 6-months Minimum Storage Capacity for Liquid Manure by 2008
- Banning the Surface Application of Liquid Manure during February and March by 2008
- Banning the Surface Application of Liquid Manure when the Ground is Frozen/Snow-Covered

I urge you to make NR 243 as strong as possible to protect the health of our families and the recreational opportunities for sportsmen and women.

Sincerely,

Name Jacque Porter

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality. I agree with this, we should be able to use our beaches and should not have to worry about the wells in the area. We are hearing more and more about this problem and some thing needs to be done to change it.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

This summer some of my friends and I are going camping in Fish Creek, Door County. Due to beach closings it's going to be a hard trip because there's nothing else to do. We choose this place for the clean water. This will not only affect us but the people and communities of Door County.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

I think NR 243 should be supported because if this problem is not dealt with, we will have even more problems in the future. No longer would people be able to enjoy themselves in Door County, including myself. Other industries will suffer from this epidemic too. Therefore this water quality problem must be solved.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality. It hurts me because I live on the bay as a summer home. We usually enjoy jet-ski's and boats on the bay. Most people enjoy going up to Door County for vacationing and swimming. Also we have a rental house and no one will rent with the ecoli problem.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

If NR 243 would be put into effect as soon as possible, there would be long term benefits. With high levels of E. Coli in the water, it affects the health of people and animals, and creates an unhealthy environment. With the contaminated runoff into lakes + streams from manure, the futures of today's children are slowly changing. The possibility of permit bans on swimming in lakes and permanent beach closing is not far off. If ~~that~~ something isn't done this will only become a talked about past time.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

Catching fish on the Fox River is not fun anymore. Fish fries are not possible when the fish caught are contaminated with chemicals such as PCBs. Swimming is a fun activity that I enjoy immensely but cannot feel safe doing in the Fox River or some beaches in Door County now that I know contamination is growing.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

NR 243 must include:

- Requiring 6-months Minimum Storage Capacity for Liquid Manure by 2008
- Banning the Surface Application of Liquid Manure during February and March by 2008
- Banning the Surface Application of Liquid Manure when the Ground is Frozen/Snow-Covered

I urge you to make NR 243 as strong as possible to protect the health of our families and the recreational opportunities for sportsmen and women.

Sincerely,

Name

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

Our ground water is a valuable resource. Contaminating by manure spreading is harming our environment, and our very important water supply.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

NR 243 must include:

- Requiring 6-months Minimum Storage Capacity for Liquid Manure by 2008
- Banning the Surface Application of Liquid Manure during February and March by 2008
- Banning the Surface Application of Liquid Manure when the Ground is Frozen/Snow-Covered

I urge you to make NR 243 as strong as possible to protect the health of our families and the recreational opportunities for sportsmen and women.

Sincerely,

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

I like to swim very much but I am afraid of what may happen to me if I enter the water.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

NR 243 must include:

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

Because when ground water gets contaminated you can't use it any more and with all the people that use the ground water there shouldn't be mass manure dumps just have it spread were needed.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

NR 243 must include:

- Requiring 6-months Minimum Storage Capacity for Liquid Manure by 2008
- Banning the Surface Application of Liquid Manure during February and March by 2008
- Banning the Surface Application of Liquid Manure when the Ground is Frozen/Snow-Covered

I urge you to make NR 243 as strong as possible to protect the health of our families and the recreational opportunities for sportsmen and women.

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

I believe that this is a good start but is not an answer by ~~having~~ banning the discharge of manure you are going to directly hurt our northern Wisconsin farms. The main culprits are the big turbine farm that just need to stop dumping not for cop use.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

in book

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality. I live in an area that is surrounded by farming. I am appalled to see that spreading from these farms onto crops is many times not used as fertilizer, but as a way to simply to get rid of this fecal matter. Along with not being able to swim at my cottage due to ecoli, recently a friend has had advance kidney, bladder, and intestinal problems due to coliform consumption.

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

Dear Administrator Ambs and Members of the Natural Resources Board,

Recently, we have seen far too many fish kills, beach closings, and well contaminations as a result of manure spills, fractured bedrock, and winter spreading.

I am directly affected by poor water quality.

How would you feel if you had to shower in DIRTY water
or spend 100's of \$ upon 100's of \$ to use clean water

That's some SHIT... LITERALLY

NR 243 is a chance to ensure premium water quality statewide, but the current standards need to be maintained and even improved.

I support the DNR's ability to act on manure spills; their mixed-animal unit calculation which accounts for the diversity of animals on Wisconsin's farms; the mandatory discharge permit application for farms with more than 1000 animal units; and the requirement that large farms apply for individual permits in order to ensure proper environmental review and public input.

NR 243 must include:

- Requiring 6-months Minimum Storage Capacity for Liquid Manure by 2008
- Banning the Surface Application of Liquid Manure during February and March by 2008
- Banning the Surface Application of Liquid Manure when the Ground is Frozen/Snow-Covered

I urge you to make NR 243 as strong as possible to protect the health of our families and the recreational opportunities for sportsmen and women.

Though I live in De Pere, my friends are the ones
losing... That is NOT RIGHT
